                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       exacerbated by increased activity of T cells and for treating prostate cancer, melanoma or epithelial cancer. A polyvalent or polyclonal antibody preparation comprising two antibodies of the invention are useful for suppressing a immune response in a patient. They are used for treating cancer, infectious diseases and promoting beneficial autoimmune reactions for the treatment of diseases with inflammatory or allergic components. The polyvalent or polyclonal preparations are useful for treating autoimmune diseases such as rheumatoid arthritis, myasthenia gravis and lupus erythematosus, multiple sclerosis, insulin dependent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               human antibody 182. This antibody specifically binds to human cytotoxic T lymphocyte associated antigen-4 (CTLA-4). Such antibodiare used in methods for inducing, augmenting or prolonging an immur response to an antigen in a patient, where the antibodies block binding of human CTLA-4 to human B7 ligands. The antibodies are also useful for treating autoimmune disease in a subject caused or exacerbated by increased activity of T cells and for treating prost

These are designated 3-F2, 1-D2 and 2-E8. They can be used in the immunotherapy-based treatment and prognosis of cancers, particularly adenocarcinomas such as salivary gland, stomach, kidney, mammary gland, lung and squamous cell carcinomas,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        08-FEB-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAB72882

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention provides the protein and coding sequences for human monoclonal antibodies which bind specifically to the HER2/neu growth factor receptor (also known as erbB2). These are designated 3-F2, 1-D2 and 2-E8. They can be used in the immunotherapy-based treatment and prognosis of cancers, particularly adenocarcinomas such as salivary gland, stomach, kidney, mammary gland, lung and sequamous cell carcinomas, and ovarian cancer. The present sequence is part of an antibody of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 polymyositis, psoriasis, rheumatic f sarcoidosis, syphilis, tuberculosis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   fusing spleen cells from mice immunised with a soluble human CD154 recombinant protein with murine PAI-O myeloma cells. The invention provides a CD154 binding molecule, in particular an antibody to human CD154, in which the VH region has the complementarity determining regions CDR1, CDR2 and CDR3 of ABI793 VH and the VL region has the CDR1, CDR2 and CDR3 of ABI793 VL. The CD154 binding molecule is especially a human antibody in which the VH and VL domains are essentially those of ABI793, with the constant parts of human heavy and light chains. DNA constructs and expression vectors are also claimed. The CD154 binding molecules are useful in inhibition of an immune reasonable of the CD154 binding molecules are useful.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 HIV infection,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              sprue, glomerulonephritis, Grave's disease, He haemolytic disease of the newborn, keratitis, polymyositis, psoriasis, rheumatic fever, rheupolymyositis, rheumatic fever, rheupolymyositis, psoriasis, rheumatic fever, rheupolymyositis, rheumatic fever, rheupolymyositis, rheupolym

Human monoclonal antibody B11 variable light chain protein.

AAM48004

(first

entry)

AAM48004

standard,

protein; 107

```
neuroprotective, antidiabetic, antinaemic, endocrine, dermatological, antithyroid, uropathic, ophthalmological and muscular activity. The antibodies or their antigen-binding fragments are useful for inhibiting growth of a dendritic cell, inducing cytolysis of a dendritic cell, cureating or preventing a dendritic cell mediated disease, detecting the presence of a dendritic cell, targeting an antigen to a dendritic cell and preventing binding of a pathogen (a virus or a bacterium) to human mannose receptor on dendritic cells. In particular, the antibodies may be used to treat, autoimmune disease, graft versus host disease, immune system or inflammatory disorders (e.g. rheumatoid arthritis), multiple system or inflammatory disorders (e.g. rheumatoid arthritis), multiple disease, diabetes mellitus, myasthenia gravis, pernicious anaemia, Addison's disease, lupus erythematosus, Reiter's syndrome and Graves disease. The present sequence is that of the human monoclonal antibody all variable light chain, useful to the invention.
                                                                                                                        Matches
                                                                                                                                                                                  Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       (a) a binding affinity constant to a dendritic cell of at least about 10 to the power 7 M-1;
(b) the ability to opsonise a dendritic cell;
(c) the ability to internalise after binding to dendritic cells; or (d) the ability to activate dendritic cells.

The isolated human monoclonal antibody or its antigen binding portion may also have any of the following characteristics:
(a) mediates cytolysis of dendritic cells in the presence of human effector cells; or
                                                                                                                                                                                                                                                   Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to human monoclonal antibodies binding portions that specifically bind to dendritic more of the following characteristics:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ig (b
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New human monoclonal antibodies specific for dendritic cells, useful for inhibiting growth or inducing cytolysis of a dendritic cell and treating or preventing a dendritic cell mediated disease, e.g.,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  (b) inhibits growth of dendritic cells. The antibodies or its antigen binding portion, bin inman mannose receptor on dendritic cells. The antimumnomodulatory, antirheumatic, antirheumatic,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Example 2; Fig 13; 95pp; English

                                                                                                                                                                                                                                                                                                                                                                              (II-12) antibodies. The antibodies comprise at least one complementarity determining region (CDR) of a heavy or light chain, a heavy chain or light chain variable region, or a heavy chain or light chain constant region. The anti-II-12 antibodies are useful in methods for diagnosing or treating II-12 related conditions, e.g. psoriasis or multiple sclerosis. The antibodies are also useful for treating immune, cardiovascular, infectious, malignant or neurological disorders or diseases. The present sequence represents the amino acid sequence of human anti-Interleukin-12 (II-12) antibody variable region #2.
                                                                                                                                                                                                                                                                                                                                Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 1; Page 93-94;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New mammalian anti-IL-12 antibodies, useful for diagnosing or treating IL-12 related conditions, e.g. psoriasis or multiple sclerosis, as well as other for treating immune, infectious, malignant or neurological
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   WPI; 2002-257482/30
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Giles-Komar
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 complementarity determining region; neuroprotective; antitipsoriatic; immunostimulant; cytostatic; anti-microbial; psoriasis; infection; multiple sclerosis; immune disorder; cardiovascular; malignant diseas
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to novel isolated mammalian anti-interleukin-12
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           07-AUG-2001;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              14-FEB-2002

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AXEXBXBX
                                                                                                                                                                                                                                                                                                                                                                                                                The present invention describes a method (M1) for producing a human cantibody phage display library (I), comprising: (1) providing a nonhuman transgenic animal (II) whose genome comprises human immunoglobulin genes; (2) isolating nucleic acids encoding human antibody chains (III) from I lymphatic cells; and (3) forming a library of display packages whose members comprise a nucleic acid encoding (III) which is displayed from the package. The method is used for producing a human antibody display library, e.g., a Fab phage display library. The display method may be used to screen nucleic acids encoding antibody chains obtained from 1 imburised nonhuman transgenic animals, and from this a population of antibodies may be prepared. Production of a human monoclonal antibodies display library using this method means there is no need to immunise human with antigens, and the difficulties faced with immortalising B cells are avoided.                                                                                                                                                                                                                                                                                                                                                               antibody phage display library (I), comprising: (I) providing a nonhuman transgenic animal (II) whose genome comprises human immunoglobulin gene; (2) isolating nucleic acids encoding human antibody chains (III) from lymphatic cells; and (3) forming a library of display packages whose members comprise a nucleic acid encoding (III) which is displayed from the package. The method is used for producing a human antibody display library, e.g., a Fab phage display library. The display method may be used to screen nucleic acids encoding antibody chains obtained from immunised nonhuman transgenic animals, and from this a population of antibodies may be prepared. Production of antibodies may be prepared. Production of antibodies may this method means there is no need to immunise humans with antigens, and the difficulties faced with immortalising B cells are avoided.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       processes and selections of the close similarity between the human and primate proteins), but retain the full antigen-binding affinity of the donor antibody.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention provides an antibody (Ab) comprising donor CDRs (complementarity determining regions) derived from a non-human antigenspecific donor antibody, and an acceptor framework from a non-human primate. The Abs are prepared by grafting CDRs from a non-human antigenspecific donor antibody onto homologous Old World age or monkey acceptor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Antibodies containing donor complementarity determining regions and non-human primate acceptor frameworks, having reduced immunogenicity in

The present invention describes a method (M1) for producing a human antibody phage display library (I), comprising: (1) providing a nonhuma transgenic animal (II) whose genome comprises human immunoglobulin gene (2) isolating nucleic acids encoding human antibody chains (III) from lymphatic cells; and (3) forming a library of display packages whose members comprise a nucleic acid encoding (III) which is displayed from the package. The method is used for producing a human antibody display be used to screen nucleic acids encoding antibody chains obtained from immunised nonhuman transgenic animals, and from this a population of antibodies may be prepared. Production of a human monoclonal antibodies display the package in the package of the package of the package of the package of the package of the package.
                                                                                                                                                                                                                                                                                                                                                                          Producing a human antibody phage display library comprises providing a transgenic animal whose genome comprises human immunoglobulin genes and isolating nucleic acids encoding antibody chains from lymphatic cells -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; antibody; immunoglobus human antibody phage display
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to producing gene libraries, comprising immunoglobulin light and heavy variable region. The method involves selecting light chain that binds with the heavy chain product to produce a functional conformation, producing a gene library comprising a collection of these light chain variable genes, and combining with gene library of heavy chain variable genes. The method is used for production of gene and antibody libraries.
                                                                                                                                                                                                                                                                                                                            Example 37; Page 121-122; 161pp;

myeloma proteins, respectively. The tramework regions to the CDR-grafted antibody were converted to the germ-line equivalent. For conversion of the K-chain, the germ-line light chain VK137 (AAR40956) was used. Germ-line framework regions are those present in immature B cells, i.e. prior to any somatic mutation which takes place during maturation. Unlike mutations in the CDRs, any mutation in framework regions does not affect affinity for an antigen and is therefore essentially random. The mutation may, however, cause the "self" antibody to be recognised as "foreign" and conversion to the unmutated germ-line sequence renders the framework regions "immuno

Treating a human patient with overexpression of ErbB2 recept metastatic breast carcinoma) of Baughman SA, (GETH) GENENTECH INC 2001-235058/24. Shak S; receptor such as a tumor or cance comprises

cancer, gastrointestinal cancer, glioblastoma, cervical cancer, ovarian cancer, liver cancer, bladder cancer, hepatoma, colon cancer, colorectal cancer, endometrial carcinoma, salivary gland carcinoma, kidney cancer, liver cancer, prostate cancer, vulval cancer, thyroid cancer, hepatic carcinoma and various types of head and neck cancer. The present sequence tumour, or a cancer. The cancer is selected from breast cancer (particularly metastatic breast carcinoma), leukemia, squamous cell cancer, small-cell lung cancer, non-small cell lung cancer, pancrea diagnosed with a disorder characterized by overexpression of ErbB2 receptor. The method comprises administering an initial dose of at least approx.5 mg/kg of the anti-ErbB2 antibody, and administering subsequent doses of the antibody in approximately the same amount or less than the initial dose. The method is useful for treating a disorder characterized by overexpression of ErbB2 receptor, particularly a benign or malignant The invention Disclosure; Fig 5A; 71pp; English relates to treating cancer in h a disorder characterized by antibody administering 11 a human susceptible cancer (e.g. pancreatic œ,

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                              490.

S31603
Ig heavy chain V region - human
C.Species: Homo sapiens (man)
C.Date: 03-Mar-1994 #sequence_revision 10-Nov-1995 #text_change 23-Jul-1999
C.Accession: S31603
R.C.Lisinier, A.M.; Gauthier, L.; Boubli, L.; Fougereau, M.; Tonnelle, C.
Submitted to the EMBL Data Library, June 1992
R.C.Baccession: S31603
A.Description: Mechanisms that generate human immunoglobulin diversity operate from the A.Reference number: S31685
A.A.Cession: S31603
A.Status: preliminary
A.Nolecule type: mRNA
A.Residues: 1-12 <CUI>A.COLORIA
A.Residues: 1-12 <CUI
A.Residues: immunoglobulin V region; immunoglobulin homology
C.Superfamily: immunoglobulin V region; immunoglobulin homology
C.Superfamily: immunoglobulin homology </td>
